Twenty years of innovation

The sixth of June 1996 King Harald officially opened The Intervention Centre at Rikshospitalet in the centre of Oslo. For one year prior to the opening we had built two futuristic suites for surgery, intervention and imaging in the park outside the main block of the hospital.

In one room GE’s Signa SP open MR designed for doing surgery on patients inside the magnet, and in the other we integrated Angiographic equipment in a room designed as an operation theatre. Soon after the opening medical staff from a number of departments started intracranial tumor surgery, open heart surgery, cardiac interventions, advanced laparoscopic procedures. In between the patients we did advanced animal experiments.

We had fulfilled the dream of Frode Læreum and Arvid Stordal, a radiologist and a surgeon who together wrote a master thesis in health administration postulating that all the advance technology being integrated in treatment of patients, also required a dedicated organization.

The Intervention Centre became a toolbox not only for doctors and nurses from the whole medical spectre, but for economists, sociologists, psychologists, physicists, cybernetics, informatics and robotics engineers. All were involved in developing new treatment methods for patients in a safe environment and studying how the new methods best could be implemented.

In 2000 Rikshospitalet moved into a new location at Gaustad, and The Intervention Centre was expanded and became a world renowned test centre for new techniques and technologies.

When all the hospitals in Oslo were merged into Oslo University Hospital in 2009, all imaging physicists were employed in a section for diagnostic physics in the Intervention Centre. The section delivered services to most hospitals in the South east region. The activities in all fields at the Intervention Centre expanded rapidly.

In 2016, the hospital was reorganized, and the time was right to divide the Centre, and organize the imaging physics in a separate department in the clinic for radiology, while the Intervention Centre was located in the Division of emergencies and critical care. At the same time the building of an expansion of the Intervention Centre was started. When the expansions are finished by the end of 2017, the Intervention Centre will double its capacity for patient treatment and research and for animal research. We will also be able to expand our function as test centre for med tech industry.

During the first 20 years the Intervention Centre performed 9478 MR imaging procedures in patients and test persons, 6694 minimally invasive surgeries and interventions in patients, 1562 animal experiments resulting in 732 scientific publications, 42 PhDs and more than 50 patents.

We thank all our collaborators within and outside Oslo university hospital for exciting 20 years, and are looking forward to what the next twenty years will bring.

Erik Fosse
Head of The Intervention Centre
2.1 ORGANIZATION MAP
2.2 SECTIONS

2.2.1 Section for Clinical Research

Section Manager: Bjørn Edwin, Professor, MD

Staff
Linda Engvik, Nurse Manager
Bjørg Scheele, OR nurse
Anne Hege Andreassen, OR nurse
Jennifer Teruel Tamson, OR nurse
Victoria Juhasz, Laboratory assistant

Delivery

- Research and development in minimally invasive surgery in the premises of The Intervention Centre
- Development and education in new techniques at Oslo University Hospital and other hospitals in Norway
- Clinical R&D in all medical domains
- Perform minimally invasive treatment of patient groups where the volume of patients within these disease groups is too low to develop secure new treatment strategies on many sites
- Perform minimally invasive treatment of patient groups requiring established multiprofessional collaboration and infrastructure currently uniquely found at The Intervention Centre. Examples are; laparoscopic pancreas and liver surgery, laparoscopic endocrine surgery, laparoscopic endometriosis surgery, laparoscopic back surgery

Main Objectives

- The section’s activities are focused on minimally invasive treatment in all surgical specialties
- The section shall be leading both nationally and internationally within its focus area within research and development
- The section shall assist and initiate research minimally invasive therapy projects
- The section promotes education locally, regionally, nationally and internationally
- The section stimulates multiprofessional collaboration because
- Minimally invasive therapy is performed in many professional settings by various specialists and thereby a common field of interest across specialties
- Minimally invasive therapy depends on development within technology and radiology
2.2.3 Section for Radiology Research

Section Manager: Per Kristian Hol, Professor, MD

Staff
Hilde Sofie Korslund, radiographer
Grethe Løvland, radiographer
Siv-Eli Simonsen, radiographer
Svein Are Vatnehol, radiographer
Kenneth Nordstrand, radiographer

Deliveries
• Radiological examinations of animals and patients treated at The Intervention Centre
• Training and supervision of healthcare personnel in new image-guided treatment techniques
• Research group in the field of MR guided High Intensity Focused Ultrasound Treatment

Main Objectives
• Have a highly qualified staff
• To be nationally and internationally leading environment for image guided treatment
• Strengthen interdisciplinary research and increase number of regional, nationally and internationally joint projects
• Contribute to innovation and secure intellectual property
2.2.4 Section for Anesthesiology Research

Section Manager: Per Steinar Halvorsen, MD, PhD

Deliveries

- Anesthesia service to all clinical and experimental projects at the Intervention Centre
- Training/supervision of healthcare personnel in new cardiovascular monitoring techniques
- Innovation/DOFI/patents
- Research group in the field of cardiovascular monitoring

Main Objectives

- Contribute to improved quality of experimental and clinical research
- Have a highly qualified staff
- Interdisciplinary research and increase the number of joint projects
- Contribute to increased innovation and secure intellectual property

Staff

Per Steinar Halvorsen, anesthetist
Viesturs Kerans, anesthetist
Kjersti Wendt, nurse anesthetist
Anton Amalathasan Josephmary, nurse anesthetist
Kari Westby, nurse anesthetist
Torill Schou, nurse anesthetist
2.2.5 Section for Medical Cybernetics and Image Processing

Section manager: Ole Jakob Elle, Associate professor, PhD

Staff
Frederic Courivaud, Senior Researcher, PhD
Espen Remme, Senior Researcher, PhD
Rafael Palomar, PhD fellow (HiG/OUS, MSc)
Rahul Kumar, Postdoc, PhD
Louise Oram, Software developer in NorMIT, MSc.
Magnus Leon Reinsfelt Krogh, PhD fellow

Deliveries
The Section for Section for Medical Cybernetics and Image Processing at The Intervention Centre aims to develop cutting-edge technological solutions supporting the whole chain in patient diagnostic and treatment, such as user interaction and information exchange in the operating suites, procedure planning, patient monitoring, and technology for minimally invasive therapies including intra-operative model update. This R&D covers a span of different technologies like monitoring technology, image and video processing, visualization, navigation technologies, biomechanical organ modelling and robotics. The solutions should give more information to the surgeon, such as sensor information and image information, during intervention and presenting this information by real-time visualization. With the ability to adapt and compensate to the deformations and motions, this information can be used to effectively guide the clinician throughout the procedure or update a robotic path to perform the desired action. This means that when you develop algorithms for diagnostics and preoperative use, less effort is put into making the algorithm fast and effective. Intra-operative use means that the algorithms used should be able to run in real-time or close to real-time. Image and video processing methods are key elements in any software system which supports minimally invasive procedures. In particular, we are focused on developing real-time image-segmentation and -registration methods where segmentation methods finds important anatomical structures such as tumors and vessel structures in images, while registration methods enables fusion of images and images to patient. Visualization and navigation is required to present the medical images to the surgeon intra-operatively.

Increased accuracy and safety may result by cross-linking medical image information with robotic systems in so-called semi-autonomous robotic systems. Biomedical models and simulation technology are developed, intended for clinical decision support such as if, when and type of surgery should be performed.

In order to be able to lead large research projects in the forefront internationally, the section should at all time have the needed competence and in-depth knowledge within medical informatics, such as software engineering, computer graphics and visualization, signal processing, image and video processing, robotics, cybernetics and mechanics. The head of section as well as the research group leaders should have high scientific qualifications, if possible at a professor or associate professor level and work in the intersection between technology and medicine. The section should work closely with different clinicians within the hospital as well as collaborating with well-known research institutions and industry both nationally and internationally. It is a goal that senior researchers have adjunct positions at UiO or NTNU.
Main Objectives

It aims to be a nationally and internationally leading research environment in technological solutions for in the following research areas:

Main research areas:

- Developing new building block for navigation technology in different surgical disciplines like laparoscopic liver resection, neurosurgery and catheter-based interventions. Such building blocks rely on new preoperative and intra-operative image analysis/processing algorithms, where the intra-operative methods need to consider real-time or near to real-time constraints such as segmentation, volume visualization and co-registration.

- Robotic technology ranging from haptic feedback and augmented reality in tele-surgical systems, semi-autonomous systems for support in the operating theatre and miniaturized robotic systems on the tip of a catheter or in a pill-cam system.

- Explore more research in areas like targeted treatment, new imaging techniques and micro technology.

- Biomedical modelling of organs like heart, liver etc., using advanced mathematical models like finite element (FEM) describing tissue properties, flow pattern for prediction and simulation.

- Development of new monitoring technology e.g. accelerometer and gyro sensors including advanced signal processing for detection of changes in heart conditions.

The section for Medical Technology Research aims for supporting the clinicians in the OR with new technological methods and new technology
2.2.6 Section for Information and Communication Technology

Section Manager: Ilangko Balasingham, Professor

Staff
Sr. Researcher
Jacob Bergsland, MD, PhD
Associate Professor Ali Khaleghi, PhD
Associate Professor Laura Slaughter, PhD

Project Leader
Knut Korsell

Delivery
- Research and publication
- Innovation in medical signal processing and communication technology
- Development of technological solutions, prototypes and demonstrators
- Intellectual property and management methods
- Multidisciplinary expertise in medical signal processing and communication technology
- Supervising students and fellows
- Teaching

Main Objectives
- to be at the forefront nationally and internationally in research and development of medical signal processing and communication technologies, and to advise on operational and acquisition projects at the center
- to lead advanced research projects that are in the forefront of international research to develop technological solutions for patient monitoring and new treatments, including minimally invasive and image-guided therapy
- to encourage their employees have academic adjunct positions outside hospital shall at all times have sufficient staffing and expertise to assist various projects initiated by other communities and contribute to a seamless collaboration between technologists and clinicians
- to provide any necessary technical manpower and expertise to participate in the multidisciplinary projects in Intervention Centre and support patient care where necessary shall have the following target areas during the period:

- develop new medical sensors based on bio-nano technologies (biological nano electronics)
- develop communication and computing systems based on biological organisms, such as molecules, cells and organs that can communicate with the Internet and cloud services for storing and processing large amounts of data
- develop new algorithms for processing and understanding of complex, large amounts of data from sensors, germplasm, medical records, test results, images, etc. in conjunction with high precision diagnosis, treatment and follow-up
- perform research and development of basic research in the form of new theories, mathematical modeling, computer-aided simulations and prototype development to preclinical testing and validation - “from bench to bedside”
2.2.7 Section for Method Development and Industry Collaboration

Section Manager: Karl Øyri, PhD

Staff
Leif-Petter Rustad, Research Coordinator
Bjørn Willy Tjønnås, Quality Coordinator
Sandre Svatun Lirhus, MSc, Health Economist

Delivery
- Coordination of the commercial Test-Bed function at The Intervention Centre
- Collaboration with Inven2 and negotiate with companies who intends to explore new technologies and collaborate with industrial partners about development protocols
- Involves relevant clinical groups at Oslo University Hospital in projects
- Make sure that all test projects are made in compliance with guidelines at Oslo University Hospital and the health authorities regarding animal and human research
- Project management support and health economy evaluation support to clinical groups who establish new technology dependent treatment methods
- Update of the project database at The Intervention Centre
- Edit the Annual Report at The Intervention Centre
- Responsible for the communication strategy at The Intervention Centre
- Responsible for the Quality System at The Intervention Centre

Main Objectives
- Is a gateway to the hospital for companies who need testing of new technologies. At least five new collaboration agreements are made with industrial parties annually
- Assists project leaders with organization, contracts and required documentation
- The Annual Report is published in the spring semester
- Regular updates of the webpage
- Responsible for Quality System maintenance including editorial responsibility
- Monthly updates of project database
- Responsible for health economy competence at The Intervention Centre

Research Groups
Clinical Testing Work Group

2.2.8 Section for Patient Treatment

This is an administrative section.
3.1 SECTION FOR CLINICAL RESEARCH

3.1.1 Image guided general surgery and intervention

*Group Leader: Bjørn Edwin, professor, MD*

**Group Members**

Mushegh Sahakyan, PhD student  
Anne Waage PhD, Surgeon  
Knut Jørgen Labori PhD, Surgeon  
Stig Ronny Kristiansen, IT-researcher  
Karl Øyri, PhD, Researcher  
Dejan Ignatovic Ph.D, Surgeon  
B.A. Bjarnebeth PhD, Surgeon  
Trond Buanes, professor

Bård Røsok PhD, Surgeon  
Airazat Kazaryan PhD, Researcher  
Åsmund Avdem Fretland, PhD-student  
Kjersti Flatmark, professor  
Leonid Barkhatov, PhD-student  
Sven Petter Haugvik, PhD-student  
Davit Aghayan, PhD-student  
Vegard Dagenborg, PhD student

**Background**

Minimally invasive surgery is evolving rapidly, and the need for systematic development and evaluation of these methods is great. Our group focuses on research on the results of new minimally invasive surgical techniques in addition to development of new procedures. Most of the research is conducted in the field of HPB-surgery (diseases in liver, bile ducts and pancreas) and adrenal surgery.
Ongoing Projects

- The Oslo CoMet-study (Oslo randomized laparoscopic vs open liver resection for colorectal liver metastasis – study). In addition to the evaluation of surgical and oncological results, several translational studies are performed, such as bio banking of tumour tissue, studies on the inflammatory response, health economy evaluation and pain/quality of life studies.

- Multicentre studies on laparoscopic liver surgery

- Research on pancreatic cancer: Examining the Role of Laparoscopic Distal Pancreatectomy in the Treatment of Pancreatic Cancer: From a Consensus Study to Randomized Controlled Trials. The main aim is to assess the oncologic outcomes of Laparoscopic Distal Pancreatectomy (LDP) in patients with Pancreatic Distal Adeno- Carcinoma, determine the prognostic factors and provide justified recommendations for its use.

- The research group also does research on MRI-guided High Intensity Focused Ultrasound (HIFU) of lesions in liver and prostate.

- Together with the University of Gothenburg, we do research on biomaterials in implants.

- Research on imaging of liver tumours (CT, MRI, PET-CT) is conducted with other research groups at the IVS and OUS.

- In a joint project, a method for automatic segmentation of liver anatomy including tumours is developed. The final goal is to create an interactive map for liver surgeons that will greatly ease both planning and the actual surgery.

- Research on reasons to onset of type 1 diabetes, DiVid study.

- Research on D3 resection of colon cancer

- The Group is also involved in many major projects e.g. HiPerNav, (EU prosjekt), NorMit, MetAction and BigMed.

- In all the projects, the group has a large international network of collaborators.

Collaborations

- Active externally funded projects.

- HSØ: Economic evaluation of laparoscopic versus open liver resection for colorectal metastasis. A cost utility analysis alongside the Oslo CoMet prospective RCT.

- Prospective randomized study of laparoscopic versus open liver resection for liver metastasis (final phase).

- Laparoscopic liver resection: 3 randomized trials.

- Kreftforeningen: HIFU: High Intensity Focus Ultrasound Ablation of the Liver under 3T MR Guidance (Refinement experimental study). (final phase)

- European Association of Endoscopic Surgery: Pancreas consensus project:

- Kvote programmet Pancreatic research
3.2 SECTION FOR RADIOLOGY RESEARCH

3.2.1 MR guided High Intensity Focused Ultrasound treatment

*Group Leader: Per Kristian Hol, Professor, MD*

**Group Members**

Bjørn Edwin, Professor MD PhD, The Intervention Centre (researcher)
Eric Dorenberg, MD PhD, Dept of Radiology, OUS Riakshospitalet (researcher)
Frederic Courivaud, The Intervention Centre (researcher) (until Q1 2016)
Tryggve Storås, PhD, The Intervention Centre (researcher)

Grethe Løvland (technician)
Svein Are Vatnehol (technician)
Kenneth O Pedersen (technician)
Ulrik Carling, MD (PhD candidate)

**Associated group members**

Viktor Berge, MD PhD, and Eduard Baco, MD, Dept of Urology, OUS Aker (researcher)
Professor Aud Svindland, MD PhD, Dept of Pathology, OUS Radiumhospital (researcher)
Kirsten Hald, MD, PhD, Dept of Gynecology, OUS Ulleval (researcher)

**Background**

High Intensity Focused Ultrasound (HIFU)-therapy is completely non-invasive as the ultrasound energy is delivered outside the body, but focused in defined areas in an organ. MR provides three-dimensional treatment planning and real-time temperature feedback. Integrating HIFU in MR-scanners melds the technology for visualization and treatment, optimize the procedure and increase the therapeutic potential of HIFU treatment. The 3 T MR at the Intervention Centre has integrated HIFU equipment as part of a research agreement with Philips Medical Systems. Focus has been on both basic and clinical research projects.

**Projects**

- MR guided HIFU in the treatment of uterine fibroids
- Basic research on MR guided HIFU of liver
- Basic research on MR guided HIFU of prostate

**Collaborations**

Philips Healthcare, Nederland: Dr Thomas Andrea
3.3 SECTION FOR ANESTHESIOLOGY RESEARCH

3.3.1 Clinical and experimental cardiovascular monitoring

*Group Leader: Per Steinar Halvorsen, MD, PhD*

**Research group members**

**Senior researchers**

Jan Fredrik Bugge, Dep. of Anesthesia and Critical Care Medicine,
Andreas Espinoza, Dep. of Anesthesia and Critical Care Medicine,
Helge Skulstad, Dep. of Cardiology,

**PhD-candidates**

Viesturs Kerans, The Intervention Centre, HYPOTHERMIA
Jo Eidet, Dep. of Anesthesia and Critical Care Medicine
Harald Bergan, Dep. of Anesth. and Critical Care Medicine, ECMO
Ole-Johannes Grymyr, The Intervention Centre, SENSORS
Stefan Hyler, The Intervention Centre and Sørlandet sykehus
Itai Schalit, The Intervention Centre, LVAD/SENSORS

Kristin Wisløff-Aase, Dep.of Anesthesia and Critical Care Medicine, HYPOTHERMIA
Siv Hestenes, The Intervention Centre/Sykehuset Akser og Bærum, SEPSIS
Hilde Karlsen, Dep.of Anesthesia and Critical Care Medicine, ECMO
Marte Sævik, The Intervention Centre/Dep. Of Cardiology, TAVI
Pengfei Lu, The Intervention Centre, PACEMAKER/CRT
Mohammad Albatat, The Intervention Centre, PACEMAKER/CRT

**Associated group members**

Professor Erik Fosse, The Intervention Centre,
Professor Thor Edvardsen, Department of Cardiology,
Professor Arnt Fiane, Department of Cardiothoracic Surgery,
Ass. professor Ole Jacob Elle, The Intervention Centre,

Professor Svend Aakhus, Department of Cardiology,
Lars Aaberge, Department of Cardiology,
Jan Otto Beitnes, Department of Cardiology,
Espen Remme, Department of Cardiology/ The Intervention Centre,
Background

A trend in cardiovascular therapies involves development of minimal invasive surgical techniques for valve repair and treatment of severe heart failure by biventricular pacing. Even though a method can be classified as minimal invasive, the procedural risks still may be high, as demonstrated by treatment of severe aortic stenosis by catheter technique (TAVI) instead of open chest surgery. Another trend in severe heart failure treatment is implantation of mechanical pumps, as either bridge to transplantation or as destination therapy as an alternative to heart transplantation. In contrast to the other therapies, implantation of a mechanical pump is a highly invasive procedure and justifies more invasive monitoring of the patient. In both cases, assessment of cardiovascular status is equally important, but requires different approaches which need to be adapted to the risks and invasiveness of the procedures. New methods for cardiovascular monitoring in the operative setting may also be used to guide and optimize treatment in hemodynamically compromised patients in the intensive care unit, such as in patients with septic or cardiogenic shock, and patients treated with therapeutic hypothermia after cardiac arrest.

Main aims

- Develop and test new technologies in cardiovascular monitoring
- Cardiovascular response to new cardiovascular therapies
- Myocardial function in therapeutic hypothermia and severe sepsis

This includes evaluating hemodynamic responses of 1) new cardiovascular image guided procedures, 2) ECMO strategies, 3) treatment for end stage heart failure with ventricular assist devices (VAD). Technologies under investigation for cardiac function monitoring include implantable 3D accelerometers, gyro, magnetometer, miniaturized ultrasound sensors, biosensors and radar. The sensors are tested in both clinical and experimental models in cooperation with other research groups at The Intervention Centre, departments at OUS and external institutions.

Ongoing research projects

- TAVI: is myocardial reserve related to long term outcome?
- Accelerometer for detection of thromboembolic events in LVAD
- Accelerometer/gyro/magnetometer for monitoring changes in right and left ventricular load and detection of graded myocardial ischemia
- Can betablockers improve survival and cardiovascular function after cardiac arrest: an experimental ECMO study
- Left and right ventricular dysfunction in severe sepsis; the effect of pulmonary hypertension and interventricular septal shift
- Myocardial effects of therapeutic hypothermia in cardiac surgery
- Effects of epinephrine and betablockers on systolic and diastolic left ventricular function during therapeutic hypothermia
- Multifunctional pacemaker systems for cardiac resynchronization therapy (CRT)

Collaborations

- OSCAR research network at Oslo University Hospital: Professor K. Sunde
- Complement Research Group at Oslo University Hospital: Professor Tom Eirik Mollnes
- Biosensor Research Group at Oslo University Hospital: Professor T. I. Tønnessen
- WIBEC EU-project at The Intervention Centre: Professor Ilangko Balasingham,
- University College of Southeast Norway: Professor Kristin Imenes //
3.4 SECTION FOR MEDICAL CYBERNETICS AND IMAGE PROCESSING

3.4.1 Medical Robotics, visualization and navigation

Group Leader: Associate professor Ole Jakob Elle, PhD

Group members
Frederic Courivaud, Senior Researcher (until Q1 2016)
Espen Remme, Senior Researcher in 30% (shared IVS/Kirurgisk forskning)
Laura Slaughter, Senior Researcher/Associate Professor
Rafael Palomar, PhD-fellow/Software developer (Permanent position from 01.09.2016)
Rahul Kumar, Postdoc
Louise Oram, Software developer in NorMIT
Kim Mathiassen, PhD fellow (also at ROBIN-group at IFI/UIO)
Egil Utheim, Researcher/Mektron
Ralf Greisiger, PhD fellow
Magnus Krogh, PhD fellow
Liubov Nikitushkina, PhD fellow (UIO/OUS/Simula/UCSD)

Background
Most minimally invasive procedures restrict the access and direct vision to the regions which require surgery. Such procedures require intra-operative image modalities such as x-ray, ultrasound or endoscopic images to be able to monitor the procedure in real-time. In many cases this information is not sufficient to perform the procedure accurately and safely. Merging information acquired pre-operatively, mainly from for instance MRI, CT or PET, with intra-operative data can increase the basis for decisions and thereby improve the safety and accuracy of the procedure. The Medical Robotics, visualization and navigation group develops cutting edge technological solutions which support minimally invasive procedures. In particular, the group is focused on developing real-time image-segmentation and - registration methods. Visualization and navigation is required to present the medical images to the surgeon intra-operatively. 3D video will be more and more cross-linked with medical image information and move toward robotics and automation of surgical procedures. The research group is doing research in all these fields of technology facilitating minimally invasive surgery.
Ongoing Projects

Ongoing NFR:
- NorMIT, National Research Infrastructure for Minimally Invasive Treatment

Ongoing Helse Sør-Øst:
- Hepa-Navi, Liver Navigation platform (Postdoc)
- Fast vessel segmentation algorithm (Innovation)
- Service at OUS – 3D printing of organ models (Innovation)
- Modulbasert Operasjonslys for Hybride Operasjonsstuer (Innovation)
- Måling av hjertefunksjon ved hjelp av en ny miniaturisert bevegelsessensor (Innovation)
- Mimiq: Tilpasningsdyktig LED sporing for navigasjon og medisinsk robotikk (Innovation)

Other ongoing projects:
- Planning and navigation platform for Laparoscopic Liver Resection
- Modell based catheter navigation and Catheter tip tracking and catheter navigation in MR
- Semi-autonomous ultrasound robot for needle insertion
- User interface/Interaction design projects

New EU-project funded:
- As coordinator of the Marie Curie ITN-project: HiPerNav (High Performance soft-tissue Navigation), start date 01.11.2016

3.5 SECTION FOR INFORMATION AND COMMUNICATION TECHNOLOGY

3.5.1 Wireless Biomedical Sensor Network Research Group

Group Leader: Professor Ilangko Balasingham

Signal Processing Group
Dept. of Electronic Syst. NTNU

Group members

Jacob Bergsland (Sr. Researcher) Øyvind Janbu (PhD student)
Ali Khaleghi (Sr. Researcher) Mladen Veletic (PhD student)
Ali Chelli (Postdoc) Hamed Fouladi (PhD student)
Younghak Shin (Postdoc) Mohammad Albatat (PhD student)
Nabiu Islam (Postdoc) Reza Shakeri (PhD student)
Pritam Bose (PhD student)
Pengfei Lu (PhD student)
Hemin Qadir (PhD student)

Background

The research group performs fundamental research and development on information and communication technologies specifically in wireless sensors and systems for applications in diagnostics, minimal invasive therapy, and ambient point of care monitoring. One of the technological focused areas is on ultra low power and reliable wireless sensor networks, where the research is on novel transceiver design, low power data compression, and processing algorithms for anomaly detection, data fusion, etc. Special interest topics are in implantable/ingestible sensors like cardiac pressure sensors, capsule endoscopes, bio-nano scale communications, and nanomachine-to-cell interfaces for stimulation for applications in cardiac, gastrointestinal, and neurodegenerative diseases. Moreover, the group also performs research in patient record and data mining, signal and image processing, and developing novel sensing and imaging systems using electromagnetic waves.

4. Co-Principle Investigator of NORBAS, (Funded by the Ministry of Foreign Affairs under the HERD/ICT for Balkan, 01.01.2012 - 31.12.2016, budget NOK 6.25 million)

5. Co-Principle Investigator of ASSET - Adaptive Security for Smart Internet of Things in eHealth, (Funded by the Research Council of Norway - VERDIKT program, 02.01.2012 - 30.06.2016, budget NOK 13.2 million)
3.6 SECTION FOR METHOD DEVELOPMENT AND INDUSTRY COLLABORATION

3.6.1 Clinical Testing Work Group

*Group Leader: Karl Øyri, PhD*

**Group Members**

Sandre Svatun Lirhus, MSc

In 2016 11 new requests from companies were made to the Test-Bed. Four of the requests ended up in new projects, and four projects continued from earlier years. The figure below illustrates the product categories of service request the section has received from med tech industry since the opening in 2013. Request concerning early phase products are dominating. 47% of the requests originate from international companies, 43% from national companies, and 10% from regional companies.

**Ongoing Projects:**

The Nordic Network of Testbeds funded by Nordic Innovation. The project objective is to harmonize clinical and administrative standards and operations, and together develop a professional service for testing of new and innovative healthcare products in the Nordic. With a “one point of contact” for all the test beds we also aim to match the companies with the testing facility that best fit their need.

OF A TOTAL EXPENDITURE OF NOK 75 768 502, 37% WAS RESEARCH FUNDED.
5 PUBLICATIONS

5.1 Peer reviewed scientific papers

Level 1 and 2 publications

The Intervention Centre 2016

(Level 2 publications in bold)

47. Trovik J, Vikanes Å. Hyperemesis Gravidarum is associated with substantial economic burden in addition to severe physical and psychological suffering. Isr J Health Policy Res. 2016;5:43.

**Level 1 Conference papers**

**5.2 Editorials and other scientific publications**

### 5.3 PhD Theses 2016

**PH.D STEFAN HYLER (01.03.2016)**  
*Microsensors allow continuous monitoring of myocardial ischemia in Cardiac surgery*  
The Intervention Centre  
Oslo University Hospital HF, Rikshospitalet  
Institute of Clinical Medicine  
Faculty of Medicine  
University of Oslo  
2016  

**PH.D WASIM ZAHID (06.10.2016)**  
*Myocardial function by echocardiography for risk stratification in patients with heart disease*  
The Intervention Centre  
Department of Cardiology  
Centre for Cardiology  
Oslo University Hospital HF, Rikshospitalet  
Faculty og Medicine  
University of Oslo  
2016  
ISBN: 978-82-8333-240-7

**PH.D LARS ERIK SOLBERG (10.10.2016)**  
*Radar based central blood pressure estimation*  
The Intervention Centre  
Oslo University Hospital HF, Rikshospitalet  
Institute of Clinical Medicine  
Faculty of Medicine  
University of Oslo  
2016  

**PH.D TRYGVE KJELSTRUP (15.11.2016)**  
*Evaluation of a Multiple Injection Axillary Block Technique by Clinical Assessment and MRI*  
The Intervention Centre  
Department of Anaesthesiology  
Oslo University Hospital HF, Rikshospitalet  
Department of Anaesthesiology  
Diakonhjemmet Hospital  
Institute of Clinical Medicine  
Faculty of Medicine  
University of Oslo  
2016  
ISBN 978-82-8333-296-4

**PH.D JO EIDET (02.12.2016)**  
*Left Ventricular Function During Transcatheter Aortic Valve Implantation.*  
The Impact of Tissue Doppler Imaging  
The Intervention Centre  
Oslo University Hospital HF, Rikshospitalet  
Institute of Clinical Medicine  
Faculty of Medicine  
University of Oslo  
2016  
ISBN 978-82-8333-311-4

**PH.D RALF GREISIGER (19.12.2016)**  
*Objective Measurement and Cochlear Implants Imaging*  
Department of Ear Nose Throat  
The Intervention Centre  
Oslo University Hospital HF, Rikshospitalet  
Institute of Clinical Medicine  
Faculty of Medicine  
University of Oslo  
2016  
ISSN 1501-7710/No. 1785
